## ENDURANCE 60

The new Pardo Endurance 60 introduces a revolutionary concept of time and space at sea, redesigning the long distance navigation. Calibrated speed, low consumption, safe and silent navigation for long cruises with superior comfort. The advanced studies of the hull enhances the capacity of navigation in displacement mode and on plane, powered by ips motorization for maximum ease of handling and safety. The maximum hull beam over 5 meters enables wide interior spaces.

The minimal and sophisticated design establishes a dialogue between interiors and exteriors, with opening gunwales extending down to the water surface.
